## **Seamless Integration with Shopify**

This PulseID plugin was specifically designed to work within Shopify and makes things easier for all levels of your personalization business. Once your customer settles on their design choices and checks out using your Shopify site, orders of any type will be processed and PulseID will print a worksheet that can be scanned at the machine (embroidery, laser, Rotary, Printer) to load the design automatically. The hands-off process eliminates errors and reduces time spent on machine setting and operation

## Complete Customization

With PulseID, you decide exactly which elements are available to personalize with. Easily select and change which fonts and colors appear on your site. You can assign different design elements to different products depending on what looks best and what produces the best quality design. Customize the location and the design area for each specific product. If you have a very large or complicated design, you can set the price to be different than a simple line of text.

## Total Automation

This plug-in uses all the power of PulseID automation technology. There is no need for digitizing or even for manual design creation. Once a template is set, all orders using that template will be created automatically along with a production-ready file.

## Easy to Use

Once PulseID is installed on your Shopify site, there's no need for any software development. You will be trained to add new templates and new products to your site quickly and easily. There's also a helpful PulseID Administrator page that displays status and gives full control of orders and production.
